

### Stay on Designated Trails

Sounds so simple, right? When you're off a trail, you'll be more likely to crush naturally-growing flora. You'll also be more likely to lose control of your bike.

### Watch for Wildlife

Most critters don't want to be bothered. When you're cycling through a park, be sure to leave the wildlife alone. Stay a safe distance and feel free to take photos with your phone, but do not approach larger mammals for your own safety and the welfare of the animal.

### Mind the Hikers

Be sure to share the road when you're around hikers or walkers. Just like you would on the road, yield to pedestrians on the path!

# Everything You Need To Know

## About Cycling in Parks

### Pick up Trash

You should never leave trash behind when you're in a park! Keep an eye out for designated receptacles, or simply take your trash home with you.

### Avoid Slopes

If you cycle on a loose slope, you run the risk of causing erosion.

### Be Careful With Brakes

When learn to brake softly when cycling through a park. Large divots will collect water and make it challenging to cycle through later, not to mention cause erosion.
